## Tilt-Up Restraining Kit - MerCruiser II

### TILT-UP RESTRAINING KIT - MERCUISER II

For protection of the stern drive lower unit and boat transom during high speed operation in extremely rough water, a Tilt-Up Restraining Kit (B-46364A1) has been devised for MerCruiser II Stern Drives as well as A-46361A1 for 4 and 6-cylinder outboards.

- \* Prevents lower unit from trailing out and slamming back against the transom in rough water.
- \* Relieves strains & stresses on drive unit mounting parts.
- \* Superior to the "old style" shock cord or rope hold-downs.
- \* Easy to install and remove.
- \* Fine tensioning adjustment.

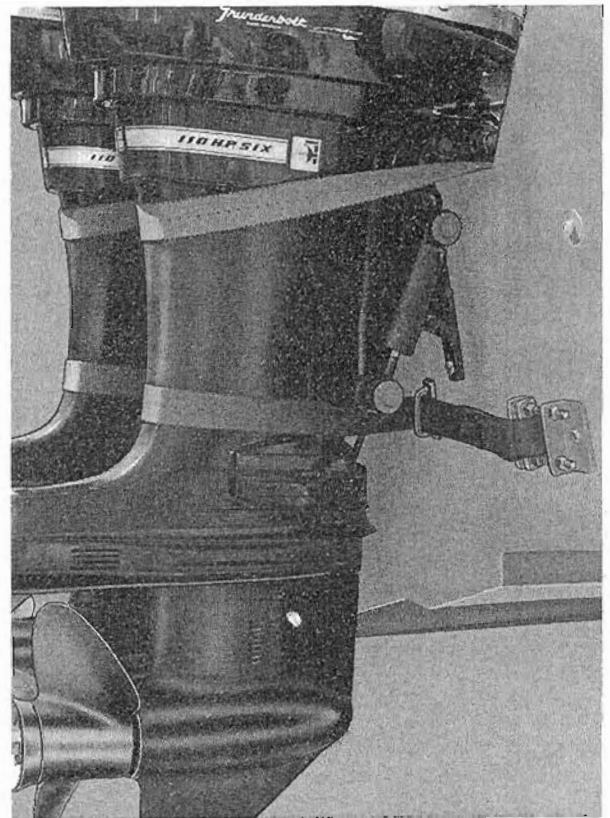

Figure 2. Tilt-Up Restraining Kit Installed on 6-Cyl. Outboards

Simple installation of Restraining Kits make them desirable customer accessories for operation under demanding conditions.
