Total Command, Joystick Inboard Control System

Models Covered

All yachts equipped with Total Command and MerCruiser DTS gasoline inboard engines.

Situation

Beginning in model year 2008, select yachts will be equipped with Total Command, a CAN-based system integrated with MerCruiser DTS inboard engines that permits docking by joystick. The joystick controls the bow thruster, the stern thruster, and the engines and transmissions in both forward and reverse gears at reduced engine RPM. Total Command includes a touch pad for thruster control to enable precise docking without the joystick.

The serial number for the Total Command system is located on the helm board.

Warranty, service, and parts will be handled by Mercury MerCruiser. All technical assistance will be handled by the appropriate MerCruiser service organization.
